

Momen Motaz

Cloud Engineer | DevOps Engineer | Site Reliability Engineer

Arish, Egypt | momenmotaz88@gmail.com | +20 106 023 2086 | linkedin.com/in/momenmotaz | github.com/momenmotaz

PROFESSIONAL SUMMARY

Cloud Engineer with hands-on experience designing, deploying, and operating AWS cloud infrastructure, Kubernetes workloads, and production-grade backend systems. Skilled in Infrastructure as Code, CI/CD, observability, and cloud automation with a strong focus on scalability, reliability, and performance optimization. Experienced building cloud-native platforms supporting AI applications and high-availability services.

CORE SKILLS

Cloud: AWS (EC2, S3, VPC, IAM, RDS, EKS, ECR, ALB, Auto Scaling, Route 53, WAF)

Containers: Docker, Kubernetes (Deployments, Services, Ingress, HPA, RBAC), Amazon EKS

Infrastructure as Code: Terraform (modules, workspaces, remote state), Helm, Ansible

CI/CD: GitHub Actions, Jenkins, build-test-deploy pipelines, zero-downtime rolling updates

Monitoring: Prometheus, Grafana, InfluxDB, Uptime Kuma, structured logging, alerting

Programming & Automation: Go, Python, Bash, YAML, JSON

Networking: VPC design, Security Groups, IAM policies, TLS, WAF, DDoS protection

Databases: PostgreSQL, Redis, ClickHouse, SQLite

Operating Systems: Linux administration, process management, SSH, shell scripting

PROFESSIONAL EXPERIENCE

Cloud & DevOps Engineer

Nov 2024 – Jun 2025

SolidPoint.ai | Remote

- Spearheaded the cloud infrastructure strategy for a production AI SaaS platform serving 500+ monthly active users with YouTube, Reddit, and web article summarization.
- Owned cloud infrastructure architecture, deployment automation, monitoring, and production reliability across 4 production services supporting 500+ monthly active users.
- Directed backend workflow automation using n8n integrating YouTube and Reddit APIs for summarization pipelines, lifting on-site engagement by more than 23%.
- Reduced Docker image size from 200 MB to 60 MB (70% reduction) using multi-stage builds and layer caching, accelerating deployments and cutting infrastructure cost.
- Drove production monitoring strategy with Uptime Kuma and an n8n and Telegram bot that scrapes logs and pages an AI agent on incidents, raising operational efficiency from 30% to 70%.

Cloud Engineer Intern

Nov 2024 – Feb 2025

Ghaymah Systems | Remote

- Owned the development of the core Ghaymah CLI supporting 3 production services with Docker deployment, secure authentication, and real-time resource monitoring, reducing manual deployment effort by 40%.
- Enhanced the MAMR secure tunneling service with TLS, DNS, and multiprotocol forwarding, improving tunneling efficiency by 89%.
- Engineered a monitoring API processing over 10,000 telemetry records daily with InfluxDB storage and proactive alerts, reducing manual monitoring by 60% and downtime by 25%.
- Architected self-healing infrastructure and custom observability dashboards tracking 15+ service metrics, cutting mean time to recovery (MTTR) by 45% across 3 production services.

Cloud Infrastructure Engineer (Training Program)

Jun 2024 – Nov 2024

DEPI Initiative (Digital Egypt Pioneers) | Remote

- Designed and deployed scalable AWS architectures using EC2, VPC, RDS, Auto Scaling, and ALB for a production web application, targeting 99.99% uptime.
- Coordinated deployment of a high-availability web application, improving page load times by 50% through ALB traffic distribution and Auto Scaling.
- Configured IAM roles, policies, and Security Groups with least-privilege principles, reducing unauthorized access risk by 40%.
- Collaborated on technical documentation, cost estimation, capacity planning, and disaster recovery procedures across 3 AWS environments.

Systems Administrator

Jan 2023 – Mar 2023

Arish University | Faculty of Computers and Information

- Deployed and configured a Windows Server-based Active Directory environment managing 5+ university computer labs with centralized authentication and policy enforcement.
- Created Organizational Units (OU) and Group Policy Objects (GPO) to enforce auto-login, website restrictions, desktop wallpaper standardization, and disabled CMD and Control Panel across all lab workstations.
- Administered server-side controls for remote management of lab machines, improving lab security compliance and reducing unauthorized system access.

PROJECTS

Sopo API Gateway — Graduation Capstone

Jan 2026 – May 2026

Go, Terraform, Amazon EKS, GitHub Actions, Helm, Prometheus

- Architected the Go API Gateway runtime powering a plugin-based API lifecycle platform, achieving 48,200 requests per second and 1.2 ms p99 latency in formal benchmarks.
- Implemented sub-50 ms hot-reload using Hasura, Redis Pub Sub, and atomic router swap with zero dropped connections at 10,000 requests per second; built a Radix Tree router with O(k) lookup and zero-allocation plugin pipeline.
- Deployed a 5-strategy load balancer, Scatter-Gather aggregation engine (12,400 requests per second with 3 upstreams), and a ClickHouse analytics pipeline sustaining 50,000 events per second with no data loss.
- Authored Terraform IaC provisioning a multi-AZ VPC, Amazon EKS, ECR, IAM, ALB, and Multi-AZ RDS PostgreSQL with GitHub Actions CI/CD, Helm-based HPA deployments, and a Prometheus observability stack.

RAG Platform — Retrieval Augmented Generation [GitHub]

Mar 2026 – May 2026

Next.js, TypeScript, Prisma, Qdrant

- Deployed a RAG platform with multi-format ingestion (PDF, text, JSON, URL, GitHub repos) and project-isolated vector database collections.
- Constructed two-stage semantic search with Bi-Encoder and Cross-Encoder reranking and intelligent fallback for 100% uptime.
- Formulated a multi-tier API key system with DDoS protection (100 requests per second per IP), global rate limiting, and AES-256-GCM encryption at rest.
- Delivered streaming AI chat supporting 3 LLM providers with source citations and persistent history across 100% of chat sessions.

DEPI DevOps Graduation Project — Canary

Oct 2025 – Dec 2025

Terraform, Amazon EKS, ECR, GitHub Actions, Jenkins

- Spearheaded a full DevOps architecture: Terraform IaC provisioning VPC, EKS, ECR, IAM, ALB, Security Groups, and public and private subnets.
- Automated CI/CD using GitHub Actions workflows triggered by Terraform apply, deploying container images to ECR and an EKS cluster with EC2 worker node groups.
- Established Jenkins CI/CD pipelines defining build, test, and production deployment stages across 5 microservices with Ansible configuration management.

EDUCATION

Bachelor of Computer Science — Grade: Very Good

Sep 2022 – Jun 2026

Faculty of Computers and Information, Arish University

CERTIFICATIONS & TRAINING

- **DEPI Round 3 DevOps Track** — Linux Admin, Ansible, Docker, Kubernetes, Jenkins, Terraform (Jun 2025 – Dec 2025).
- **NTI Cloud Architecture Internship (120 hours)** — AWS Cloud Practitioner and Solutions Architect Labs (Jul 2025 – Aug 2025).
- **AWS Academy Cloud Architecting** — Amazon Web Services (Oct 2024).
- **AWS Academy Cloud Security Foundations** — Amazon Web Services (Sep 2024).
- **AWS Knowledge: Architecting** — Amazon Web Services (Sep 2024).
- **AWS Cloud Quest: Cloud Practitioner** — Amazon Web Services (Aug 2024).
- **Cisco CyberOps Associate** — Cisco (Aug 2023).

LEADERSHIP EXPERIENCE

- **Lead Cloud & DevOps Engineer**, SolidPoint.ai: Directed cloud infrastructure, DevOps practices, and production operations for an AI SaaS platform serving 500+ monthly active users.
- **Core Contributor**, Sopo API Gateway (Graduation Capstone): Drove system architecture, API gateway design, and cloud deployment strategy for a team-based capstone project.
- **Online Instructor**, PNA Academy (Jan 2023 – Dec 2024): Mentored undergraduate students through online OOP in C++ sessions reaching learners across social media platforms.

AWARDS

- **7th Place — AI Week Hackathon**, Mansoura University (Jan 2026): selected to represent Arish University at the First Summit Week for Artificial Intelligence.
- **2nd Place — University Cultural Competition**, Arish University (Mar 2024).
- **Hackathon Youth Recognition Award** (Mar 2024) for an accepted innovative hackathon proposal.

LANGUAGES

- Arabic (Native), English (Professional Working Proficiency).
