Momen Motaz

Cloud Engineer | DevOps Engineer | Site Reliability Engineer

Cairo, Egypt | momenmotaz88@gmail.com | +20 106 023 2086 | linkedin.com/in/momenmotaz | github.com/momenmotaz

PROFESSIONAL SUMMARY

Results-driven Cloud & DevOps Engineer with hands-on experience building, automating, and maintaining resilient cloud infrastructure and web applications. Proven track record taking business-critical systems from development to live production, establishing streamlined CI/CD pipelines, robust observability, and scalable AWS/Kubernetes environments. Adept at bridging infrastructure reliability with rapid product delivery to help engineering teams accelerate release velocity, optimize cloud costs, and improve system availability and reliability.

TECHNICAL SKILLS

Cloud & Networking: AWS (EC2, S3, VPC, IAM, RDS, EKS, ECR, ALB, Auto Scaling, Route 53, WAF), TLS, Security Groups
Containers & Orchestration: Docker, Kubernetes (Deployments, Services, Ingress, HPA, RBAC), Amazon EKS
Infrastructure as Code: Terraform (modules, workspaces, remote state), Helm, Ansible
CI/CD & Automation: GitHub Actions, Jenkins, build-test-deploy pipelines, rolling updates
Monitoring & Observability: Prometheus, Grafana, InfluxDB, Uptime Kuma, structured logging, alerting
Programming & Scripting: Go, Python, Bash, TypeScript, JavaScript, SQL, YAML
Full-Stack Development: Next.js, React, Express.js, Node.js, TailwindCSS, REST APIs, OpenAPI/Swagger
Databases: PostgreSQL, Redis, ClickHouse
Operating Systems: Linux administration, SSH, shell scripting

SOFT SKILLS

Collaboration & Communication: Cross-functional teamwork, stakeholder communication, requirements gathering with non-technical users
Project Management: End-to-end project ownership, self-driven delivery, task tracking (Linear, Jira)
Professional Strengths: Fast learner, analytical problem-solving, time management, adaptability

PROFESSIONAL EXPERIENCE

Full-Stack Software Engineer **Aug 2026 – Present**

Fadl Clinic | Cairo, Egypt

- Packaged and deployed the full-stack system to a production Linux server, configuring automated CI/CD via GitHub Actions, reverse proxy routing, SSL/TLS, and Cloudflare R2 storage.
- Enforced edge JWT session validation with sliding renewal, CASL role-based access control (Admin and Reception roles), Cloudflare Turnstile anti-bot verification, and OWASP API hardening.
- Established comprehensive test suites using Vitest, Playwright (E2E), and k6 load testing, validating high-concurrency booking workflows under peak clinic traffic.
- Developed a custom scheduling engine handling multi-doctor shifts, exception calendars, buffer intervals, and overlapping bookings with idempotent transactional guarantees.
- Architected the clinic management system and patient portal on a Turborepo monorepo (Next.js, Express.js, PostgreSQL) integrated with an asynchronous WhatsApp messaging service (OpenWA API).

Cloud & DevOps Engineer **Nov 2024 – Jun 2025**

SolidPoint.ai | Remote (Part-time)

- Directed cloud infrastructure architecture, deployment workflows, and production reliability for an AI SaaS platform delivering video, discussion, and web article summarization.
- Streamlined backend processing pipelines using n8n with YouTube and Reddit API integrations, accelerating content summarization workflows.
- Optimized Docker images using multi-stage builds and caching strategies to reduce image size and improve deployment efficiency.
- Introduced centralized monitoring with Uptime Kuma and a proactive incident alert bot to improve incident visibility and response.

Cloud Engineer Intern **Nov 2024 – Feb 2025**

Ghaymah Systems | Remote (Internship)

- Developed the core Ghaymah CLI supporting 3 production services with containerized deployment, secure authentication, and real-time resource tracking.
- Enhanced the MAMR secure tunneling service with TLS, DNS, and multiprotocol forwarding, significantly improving connection stability and throughput.
- Built a telemetry ingestion API integrated with InfluxDB and proactive alerting, centralizing service metrics and streamlining system observability.
- Configured automated recovery policies and custom Grafana dashboards to monitor service health and accelerate incident resolution across production services.

Cloud Infrastructure Trainee **Jun 2024 – Nov 2024**

DEPI Initiative (Digital Egypt Pioneers) | *Remote (Training)*

- Architected scalable multi-tier AWS environments utilizing EC2, VPC, Multi-AZ RDS, Auto Scaling, and Application Load Balancers for high-availability web workloads.
- Configured least-privilege IAM roles, policies, and Security Groups; authored technical documentation, cost estimation models, and disaster recovery plans.

Systems Administrator **Jan 2023 – Mar 2023**

Arish University | *Faculty of Computers and Information*

- Deployed and administered a Windows Server Active Directory environment managing 5+ computer labs and 120+ client workstations with centralized authentication and security policy enforcement.
- Applied Group Policy Objects (GPOs) and user access controls across 120+ lab machines, eliminating unauthorized software modifications and standardizing operational desktop environments.

PROJECTS

Sopo API Gateway — Graduation Capstone **Jan 2026 – May 2026**

Go, Terraform, Amazon EKS, GitHub Actions, Helm, Prometheus

- Architected a scalable Go API gateway runtime featuring a Radix Tree router with O(k) path matching and modular middleware execution.
- Engineered dynamic configuration hot-reload with atomic router swap using Hasura and Redis Pub/Sub; built a multi-strategy load balancer with scatter-gather request aggregation.
- Provisioned production AWS infrastructure with Terraform IaC (multi-AZ VPC, Amazon EKS, ALB, RDS PostgreSQL) alongside GitHub Actions CI/CD, Helm HPA, and Prometheus observability.

Dragon AI — RAG Platform **Mar 2026 – May 2026**

Next.js, TypeScript, Qdrant

- Built an enterprise RAG platform supporting multi-format ingestion (PDF, text, JSON, URLs, repositories) with tenant-isolated vector collections in Qdrant.
- Constructed a two-stage retrieval pipeline using Bi-Encoder and Cross-Encoder reranking with graceful fallback mechanisms for reliable document search.
- Formulated a secure API key management tier featuring request rate limiting, IP throttling, AES-256-GCM data encryption, and streaming multi-LLM chat with citation grounding.

DEPI DevOps Graduation Project — Canary **Oct 2025 – Dec 2025**

Terraform, Amazon EKS, ECR, GitHub Actions, Jenkins

- Engineered complete cloud infrastructure using Terraform IaC to provision multi-tier VPC, Amazon EKS cluster, container registries (ECR), IAM roles, and Load Balancers.
- Orchestrated end-to-end CI/CD using GitHub Actions and Jenkins pipelines, managing automated build, test, and containerized deployment stages across microservices.

EDUCATION

Bachelor of Computer Science — CGPA: 3.45 (Very Good) **Sep 2022 – Jun 2026**

Faculty of Computers and Information, Arish University

CERTIFICATIONS & TRAINING

- **Cisco Certified CyberOps Associate** — Cisco (Aug 2023).
- **DEPI DevOps Track (6-Month Professional Program)** — Linux, Ansible, Docker, Kubernetes, Jenkins, Terraform (2025).
- **NTI Cloud Architecture Internship (120 Hours)** — National Telecommunication Institute, AWS Solutions Architect Labs (2025).
- **AWS Academy Graduate** — AWS Academy Cloud Architecting, AWS Academy Cloud Security Foundations (2024).

LEADERSHIP & MENTORSHIP

- **Technical Instructor & Mentor**, PNA Academy (Jan 2023 – Dec 2024): Conducted online OOP and programming sessions in C++, mentoring undergraduate students across collegiate learning communities.
- **Academic Peer Mentor**, Faculty of Computers and Information: Guided junior university students in data structures, algorithms, and Linux system fundamentals.

AWARDS

- **7th Place — AI Week Hackathon**, Mansoura University (Jan 2026): Selected to represent university at First Summit Week for AI.
- **University Cultural Competition (2nd Place)** & **Youth Hackathon Award**, Arish University (Mar 2024).

LANGUAGES

- Arabic (Native), English (Intermediate / B1).
